
Project Status Report

Accomplishments

1. Task 1

Finalize project pitch.

- Date Completed: [2024-10-3]
- Outcome: [We have decided pivot to a new concept inspired by the guest speakers as we had major roadblocks with our initial idea]

2. Task 2

Refine project scope, business case and requirements document.

- Date Completed: [2024-10-27]
- Outcome: [We have met with our industry partners and presented our solution, gathering feedback to refine our documents]

3. Task 3

Created figma HI-FI prototypes and converted the design to our Django.

- Date Completed: [2024-11-22]
- Outcome: [We have created the HI-FI prototypes and is actively importing the design into code.]

Pending Tasks

1. Task 4

Finish structuring the rest of the pages for our application.

- Estimated Completion Date: [Jan 6th]
- Reason for Delay: [Had to pivot from initial project idea.]

2. Task 5

Start implementing some features such as account creation, login, logout, leaderboard, admin, reward shop.

- Estimated Completion Date: [Feb 20th]
- Reason for Delay: [Busy during the break between semesters.]

3. Task6

Testing the functionality of our application.

- Estimated Completion Date: [March 7th]
 - Reason for Delay: [Have to wait until the features have been implemented.]
-

Goals and Timeline

Task	Deadline	Status	Notes
Task 4	[Jan 6th]	[Pending]	[Currently have the dashboard page created.]
Task 5	[Feb 20th]	[Pending]	[N/A]
Task 6	[March 27th]	[Pending]	[N/A]

Challenges

1. Delays Due to Initial Pivot

Our initial project idea encountered significant roadblocks, which led us to pivot to a new concept. This caused delays in the timeline, particularly in defining project scope and setting up the development environment for the new idea.

- Action Plan: [We will focus on completing the MVPs, such as structuring core pages and implementing necessary features, while setting a more realistic timeline for the project.]

2. Learning Django

We had to spend time learning the basics of Django because we are both unfamiliar with the framework.

- Action Plan: [Follow tutorials to understand the fundamentals and set up the environment, complete smaller exercises to get more experience.]
-

Conclusion

The project has made solid progress despite facing challenges early on. We've successfully pivoted to a new concept, refined our project scope, and started building out the application's core features. The next steps include focusing on structuring the remaining pages and implementing essential features. We will also aim to conduct thorough testing once the core features are in place.

We remain optimistic about the project's success and look forward to refining the application with active feedback from our industry partners.
